ABHILASH PRAHARAJ

SOFTWARE ENGINEER

Bhubaneswar | abhilashpraharaj122@gmail.com | https://github.com/abhilash404 | 8984530251

Summary

Computer Science undergraduate with hands-on experience building LLM-powered systems, autonomous agents, and production backend APIs. Focused on AI/LLM engineering with practical exposure to agentic workflows, retrieval-augmented generation, and full-stack deployment.

Work Experience

Community Manager – Bloomgen 2023 – 2024

Teamwork | creativity | social media management

- Led community growth, engagement, and moderation.
- Organized events and managed communication across channels.
- Improved user experience and supported the core team with insights.

Business Analyst Intern – HomeEasy.com Jan 2026 – Feb 2026

Python | Google Sheets API | GCP | Power BI | Task Scheduling

- Built automated data pipelines using Google Sheets API on GCP to eliminate manual data entry for the finance department, scheduled to sync daily at 12:01 AM.
- Developed Power BI dashboards providing real-time visibility into key financial metrics, reducing manual reporting overhead for the team.

Projects

LLM Code Deployment Agent

Python | FastAPI | Groq | GitHub REST API

- Built an autonomous agent that receives a task brief via API, uses an LLM to generate a complete single-page web app, deploys it to GitHub Pages via the GitHub REST API, notifies an evaluation endpoint, and handles round-2 revision requests — entire pipeline runs asynchronously within 10 minutes.

Surgical-RAG – Targeted Correction Framework for RAG

Python | Groq (Llama 3.3 70B) | DeBERTa-v3 | FAISS | SentenceTransformers

- Built a claim-level hallucination correction pipeline using NLI-based verification (DeBERTa) and selective masked regeneration, achieving a 28.2% average token efficiency gain over standard RAG; authored a research paper and presented at a department-level competition.

College Timetable Scheduler

Python | FastAPI | PostgreSQL | OR-Tools CP-SAT | Celery | Redis

- Built a constraint-based timetable scheduling engine designed as an ERP-integrable microservice for collegewide use across various programs; modeled complex academic constraints (parallel electives, faculty-section assignments) using CP-SAT solver with async execution via Celery + Redis.

Cinema Audience Forecasting

python | scikit-learn | XGBoost | HistGradientBoosting

- Built a time-series forecasting pipeline on messy multi-source cinema booking data (POS + online), engineering features across holidays, weekends, and booking trends, and ensembling LightGBM, XGBoost, and HistGradientBoosting for final predictions.

Skills

Languages: Python, Rust, JavaScript, SQL

Frameworks & Libraries: FastAPI, Flask, LangChain, Pydantic, Celery, SQLAlchemy

AI/ML: LLMs, RAG, Prompt Engineering, Groq, Gemini, HuggingFace Transformers, scikit-learn, pytorch, sentence-transformers

Databases & Storage: PostgreSQL, SQLite, Redis

Tools & Platforms: Git, GitHub API, Render, Linux, Celery

Education

Silicon University, Bhubaneswar

B.Tech in Computer Science and Technology *2023 – 2027*

Indian Institute of Technology, Madras

B.Sc. in Data Science *2023 – 2027*

Guidance English Medium School, Bhubaneswar

Secondary Education *2022*

Modern School, Nagpur

Matriculation *2020*
